What's Hot in Dishwashers

1. FORZA's 24-in. built-in Tall Tub Dishwasher features 16 settings, six washing programs, low energy consumption and an extra power-washing setting for heavy soiled pots and pans. In a stainless-steel finish, the handle's dramatically sculpted lines are indicative of the company's radical Italian design, influenced by the history of Ferrari and Maserati.

2. LG ELECTRONICS has launched updated models of its Wi-Fi enabled, Energy Star-certified LG QuadWash dishwashers, including model LDP6809SS. Features include smart controls and a quiet 40 to 44db operation. LG QuadWash also boasts SmartThinQ technology, allowing users to monitor wash cycles, download improved cycles and provide smart diagnoses from a smartphone.

3. The WHIRLPOOL 18-in. Dishwasher with Stainless-Steel Tub has as much power as its larger counterparts, thanks to a separate spray arm in each rack and a sensor cycle that provides the right setting for each load. This small-space dishwasher fits eight full place settings.

4. FOTILE's Q7 Sink Dishwasher is the integration of a dishwasher, sink and food-cleaning machine. The Q7 sink dishwasher uses approximately 1.6 gallons of water, finishes in just 30 minutes and will soon be available with a garbage disposal. The dishwasher has a variable frequency dual pump, which combines an axial flow pump and a centrifugal pump to allow cleaning and sterilization to be done in a one-step process.

5. The BIG CHILL Classic Dishwasher – now available in a brushed-copper finish – can hold 14 place settings, has six available cycles and is Energy Star rated. The interior is stainless steel, and the exterior includes an authentic rugged metal trim. The unit is available in brass, satin-nickel and chrome finishes.

6. Now in two model options, with or without a water softener, **COVE** – the latest brand from Sub-Zero and Wolf – has a fully adjustable interior and a nearly silent cleaning cycle. Cove units are also connected-capable, allowing users to receive notifications when it's time to replenish items like dishwasher detergent and rinse aid.

7. The new AEG ComfortLift Dishwasher with QuickSelect controls is an upgrade from the 2016 version; both let the user gently slide and lift the lower basket up and down for easy loading and unloading. The upgraded dishwasher features AirDry Technology to improve drying performance, as well as a removable cutlery tray and a dedicated glass-washing program.

8. Available on BOSCH Home Appliances 800 and Benchmark Series dishwashers, the new CrystalDry technology ensures dishes are as dry as they are clean. This patented drying technology naturally transforms moisture into heat that measures up to 176 degrees, which is gently circulated across dishes for optimal drying performance.

9. The Brama Stainless Dishwasher by **VINOTEMP** is an Energy Star-certified dishwasher with a 16-place setting capacity. The dishwasher also boasts a flexible racking system to accommodate tall dishes, a quiet 44db operation, six cycle selections and a turbidity sensor to customize and enhance cleaning.

10. The new Rise 24-in. Trifecta Dishwasher from **JENNAIR** boasts an ultra-low volume with three-stage filtration, pressurized wash arms and alternating wash action in two wash zones. The dishwasher is Wi-Fi connected and includes remote start with custom wash styles and the ability to check cycle status. Immersive theater lighting gradually increases to full intensity, illuminating the dishwasher tub and minimizing shadows inside.

11. From GAGGENAU, the 400 Series back-wall illuminated dishwasher boasts Zeolite Drying technology to enable all dishware – including plastics – to be fully dried. Zeolite is a natural mineral that allows moisture to be transformed into heat up to 176 degrees Fahrenheit, subsequently distributing the warm air equally across dishes. Home Connect is also now available with this product.
